Date: February 24

Time: 5pm

Location: Teams

Objective: Begin Part 2 of project: identify stakeholders, functional requirements, software requirements

Team Members Attended: Anna Ross, Sriya Annem, Kaden Huber, Hart Nurnberg, Audrey Pan, Sabeen Ahmad

Tasks Allocated:

- Sabeen
    - intro & data entities
    - add part 2 to git
- Anna
    - stakeholders & data entities
- Kaden
    - Functional Requirements
- Hart
    - Functional Requirements
- Audrey
    - Non Functional Requirements
- Sriya
    - Software Requirements
    - look up pros and cons for postgres

Follow-Up Actions: See Tasks Allocated

Task Completion Confirmation:

- Hart did speak with Saiedian about the project and informed us all
- We turned in part 1
- Team members are still completing research on their sections

Github Repo Management: Sabeen upload part 2 when complete

Next Meeting Date: March 3rd @ 5pm to work on Conceptual Model

Meeting Notes

What kind of tools should we use:
- MariaDB vs PostGres
  - one has a better interface than the other

non functional requirements
- how specific should we get?
  - how fast it should be: make this specific and try to hit it but not too much pressure to do so

ideas for stakeholders:
- Library Staff and Management
- County

Ideas for functional requirements:
- look at our scope and create functions for each
- brainstorm more requirements

Ideas for functional requirements:
- security
  - implementing diff roles for users to make sure people are given the correct views and not given more info than needed
- have a performance metric

Ideas for Hardware and software:
- choosing between postgres and mariaDB
- specify this works for all OS system,macOs, linux, etc

Deadline for Our Parts
- Due Friday Night then through email discuss any points from the doc
- Write down your section in the part2 doc found in project parts folder
